

Silikal Floors for the automotive sector
MANTHEY RACING

Expect more from your floor.

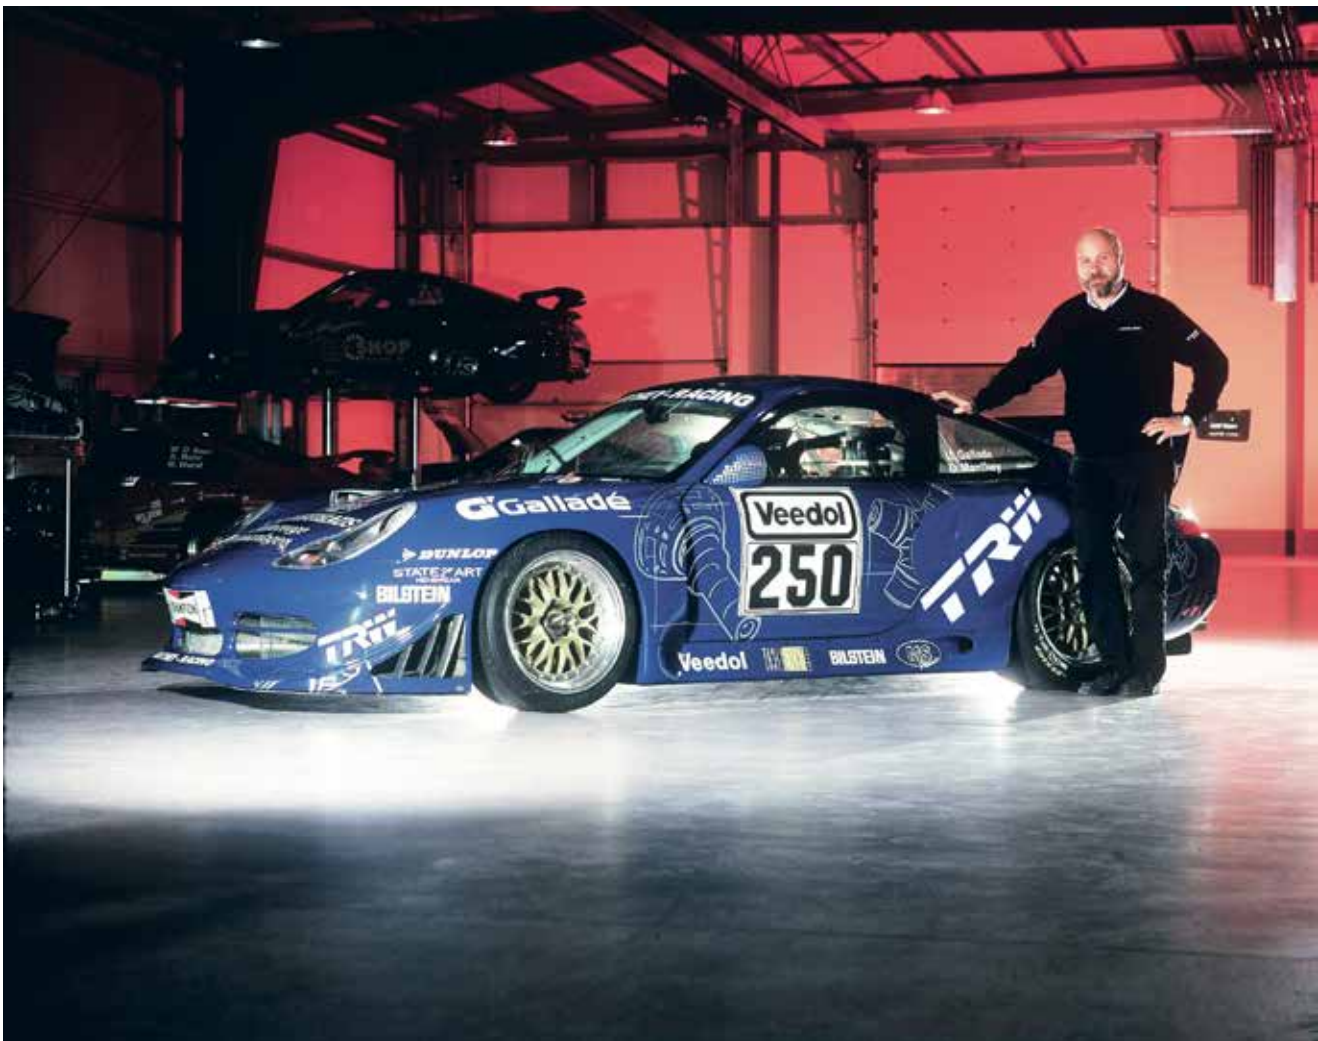

This racing team places its bets on safe, sanitary and superb flooring

... it is robust, seamless, "goes down in a jiffy" and is ready for full use after only 1 hour: flooring made from Silikal reactive resins.

If you are an aficionado of fast and fancy cars, love the sinuous purring of an engine, the distinctive odor of motor oil or gas and the screeching of hot brake linings, then this place is going to warm the cockles of your heart. Manthey Racing is a Mecca for motor sports enthusiasts from all over the world.

In the company's new workshop directly adjacent to the world-famous Nürburgring, racing cars are made ready for the prestigious Porsche Cup. In addition, regular family cars are customized here and old-timers lovingly restored to their former splendor.

And all this is done in a virtually pristine surrounding because flawless cleanliness has always been an integral element of the company's philosophy. And the groundwork for it all is the clean, bright, easy-care reactive resin floor from Silikal.

Manthey-Racing – a Mecca for

MOTOR SPORTS ENTHUSIASTS

Floor in silver-grey and blue

INDIVIDUAL COLOUR MIXING

When Manthey Racing moved into its generous new hall at the Technology Center on the Nürburgring in summer 2000, they found around 1,500 m² of Silikal reactive resin flooring underfoot, an attractive and highly durable basis for their coming work. The floor's colour mixture was specially made for this project and included a pure white base and a 10 % portion of each of the company's colours of silver grey and blue. This gave the workshop an unusually bright and fresh appearance.

Olaf Manthey:
 "The first impression a customer should get when he enters should be that of a clean, bright and friendly automotive workshop."

But it is still the seamless, monolithic and absolutely non-porous surface of the floor that makes it so safe for both, employees and customers. In a place where oil, acid, fuel and rubber tracks are constantly attacking the floor, where not just heavy horsepower but also heavy forklift trucks need a rock-solid surface to drive on, Silikal reactive resins offer total reliability.

Resistant to wear and tear and to high pressure, easy to clean and able to withstand even highly aggressive media, Silikal floors are taking the pole position all over the automotive industry today – on the Nürburgring too!

The team manager is of the opinion that
„First impressions are important.“

The Mecca of german motorsport – the Nürburgring

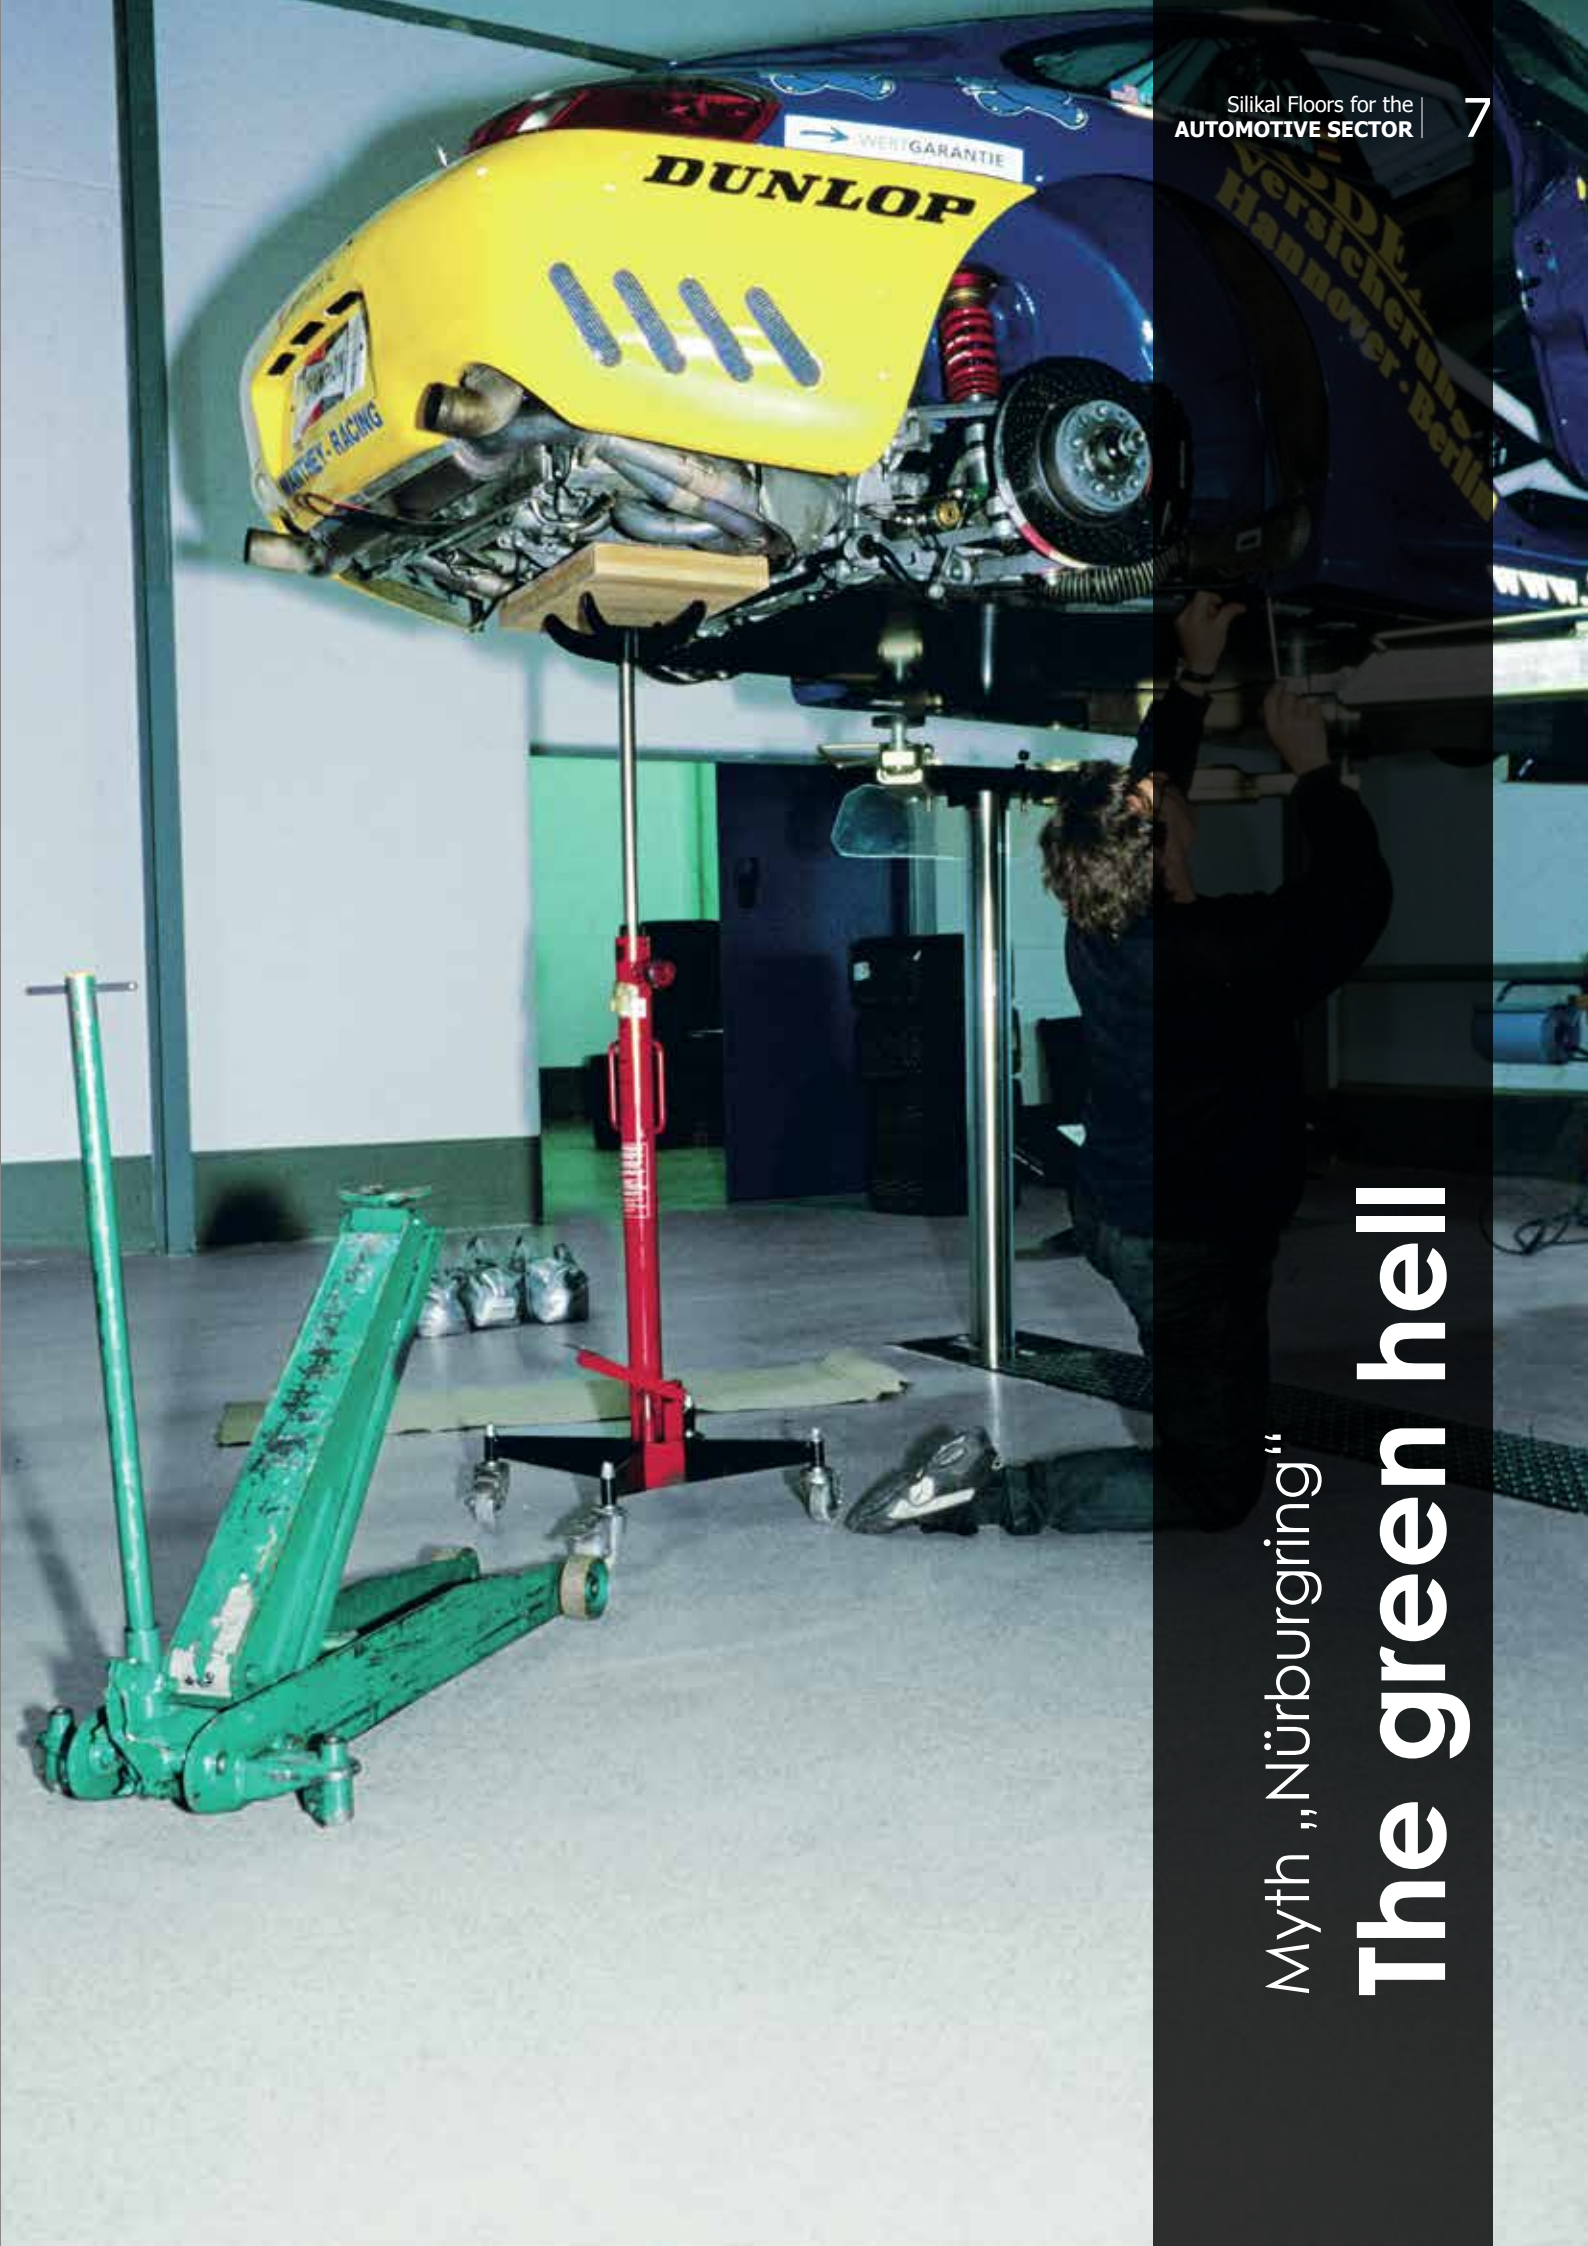

“There is no better place on earth than this”, says Olaf Manthey.

The racing cars can drive directly out of the workshop and onto the track to be tested. This provides the Manthey team with optimum training conditions for the many racing cars Manthey takes to the course with in the Porsche GT3 Cup (as part of the Formula 1 season), in the German Veedol Endurance Cup, one of the racing series with the oldest tradition on the Nürburgring, and in

the 24 Hour Ring Race. And this immediate proximity to the famous “Ring” is also just the ticket for the private customers of this automotive workshop. It offers them the one-of-a-kind opportunity of taking their freshly tuned baby for a few test rounds right on the Ring itself.
