

Silikal floors in the kitchen of
JOHANN LAFER'S "STROMBURG"

Expect more from your floor.

A setting rich in history – A pioneer in indulgence

Home and workplace of celebrity chef Johann Lafer, the 1,000-years-old "Stromburg" castle is one of Germany's finest gourmet destinations.

Within these historic walls is a fittingly modern and smart kitchen, equipped with a Silikal reactive resin floor.

Situated close to Bad Kreuznach, "Stromburg" overlooks the historic town of Stromberg in the Hunsrück mountains.

This grand spot is now a mecca for gourmets, having been transformed by the celebrated TV chef Johann Lafer and his wife Silvia into a restaurant and hotel in a class of its own.

When it recently came to reflooring the spacious kitchen – the "beating heart" of the multi-award-winning culinary haven – the couple decided on a reactive resin coating from Silikal.

Silikal coating for the “beating heart” of the gourmet haven

The flooring contractors only had a narrow time frame while the kitchen was closed for holidays to complete the floor restoration project, which turned out to be quite a complicated procedure.

After the existing epoxy resin coating was sanded, the floor was found to have rising damp. For this reason, the surfaces required a twofold build-up using the appropriate special systems from Silikal.

The colour concept of the new floor is very attractive and is perfectly matched to the look of the professional kitchen. The sprinkled light grey, silver grey and black coloured quartz sand reinforces the impression of good taste. In addition, the quartz sand gives the surface a non-slip texture.

The “Stromburg” kitchen has adopted Lafer’s motto “Living for Good Taste” and the durability of the floor will be put to the test as this kitchen is a hive of activity from early morning till late night. At peak times, up to 18 staff work here. And, naturally, no compromises can be made on hygiene: The tight, completely joint-free synthetic resin floor can be cleaned thoroughly, quickly and easily.

The “lord of the castle” himself was full of praise for it:

“EXCELLENT FLOOR!”

The surfaces are resistant to the effects of many acids, salts, fats and cleaning agents. Rough boxes and trolleys do not leave any lasting marks. This feature is not to be underestimated, especially in the store room, which was also coated with the reactive resin systems.

Around 100 square metres of reactive resin flooring from Silikal was laid in “Stromburg”. Coving of ten centimetres in height with a sprinkling of coloured flakes was additionally integrated to make the corners easy to keep clean. Five floor drains and two floor pans were also replaced in the process and incorporated flush with the floor.

“Stromburg” owner Johann Lafer, for one, was full of praise after the new kitchen floor was finished, both for the execution and the result:
“An excellent floor”.

This was Lafer’s second encounter with Silikal systems: 400 square metres of synthetic resin from the Mainhausen-based Silikal was used in the new school canteen for the grammar school “Gymnasium am Römerkastell” in Bad Kreuznach – a pilot project of the versatile Michelin-starred chef.

Silikal. One name for all floors.

Your call – Silikal!

The best at a glance:

Hygienic and clean

- ▶ Monolithic, seamless surface
- ▶ Resistant to alkalis, acids, greases, oils, salts and other aggressive media
- ▶ Easy to take care of

Safe

- ▶ Anti-skid surface grades
- ▶ Wear and tear resistant
- ▶ Can withstand hot and cold

Quick and beautiful

- ▶ Extremely short curing times; no interruptions in business when renovations are made!
- ▶ Easy to apply, even at temperatures below zero
- ▶ Selection of appealing colours, e. g. with coloured quartz sand or flakes mixtures as standard

Certified Quality and Ecology Management Systems
Reg. No. 73 100 / 104 663

Our products are certified by HACCP international

Our products comply with the European Halal guidelines

Certified according to AgBB evaluation scheme
